## SKU:SEN0526 (<https://www.dfrobot.com/product-2637.html>)

(<https://www.dfrobot.com/product-2637.html>)

### 1. Introduction

This digital I2S MEMS Microphone works well with microcontrollers with I2S audio outputs like ESP32. Compared with traditional analog ones, this microphone features low noise, high sensitivity & reliability, and other excellent performances, which make it applicable to projects like voice recognition, recording, AI learning, Bluetooth audio transmission, and so on. This module uses surface mount MEMS I2S microphone sensor with top port, no components at the bottom, which can be embedded into various applications conveniently. Besides, DFRobot provides users with Arduino library for this product to allow them easily get started on ESP32.

### 2. Features

- Small in size
- Low power consumption & high performance
- I2S digital output with low noise
- MEMS sensor with high reliability
- Provides Arduino library for working on ESP32

### 3. Application

- Voice recognition

- AI learning
- Recording
- Bluetooth audio streaming
- Smart home audio projects

FAQ

Name	Function	Description
GND	Power -	Negative pole of power supply
SCK	I2S clock	Serial data clock for I2S interface
SEL	Select left or right channel	Left/Right Channel Select. When set low, the microphone outputs its signal in the left channel of the I <sup>2</sup> S frame; when set high, the microphone outputs its signal in the right channel
WS	Data field select	Select the data of the left or right channel, connect to WS of I2S interface
DO	Data output	Serial data output of the I2S microphone

## 5. Specification

- Operating Voltage: DC 3.3V
- Microphone Packaging Process: MEMS
- Direction: Omnidirectional
- Data Port: I2S
- Sound Pressure Level: 140dB
- Signal-to-noise Ratio: 59dB
- Dimension: 11mm×16mm/0.43×0.63"

## 7. ESP32 Tutorial

---

### 7.1 Microphone Input Test

#### 7.1.1 Hardware Requirements

- FireBeetle 2 ESP32-E IoT Microcontroller (<https://www.dfrobot.com/product-2195.html>) (SKU: DFR0654) × 1
- Fermion: I2S MEMS Microphone (SKU: SEN0526) × 1
- M-M/F-M/F-F Jumper wires

#### 7.1.2 Software Requirements

- Arduino IDE (<https://www.arduino.cc/en/software>)
- Install SDK: refer to the wiki of FireBeetle 2 ESP32-E IoT Microcontroller ([https://wiki.dfrobot.com/FireBeetle\\_Board\\_ESP32\\_E\\_SKU\\_DFR0654](https://wiki.dfrobot.com/FireBeetle_Board_ESP32_E_SKU_DFR0654)) for SDK installation tutorial
- Download and install the **Arduino Library** ([https://github.com/cdjg/DFRobot\\_MSM261](https://github.com/cdjg/DFRobot_MSM261)) (About how to install the library? (<https://www.arduino.cc/en/Guide/Libraries#.UxU8mdzF9H0>))

#### 7.1.3 Connection Diagram

#### Pin Connections:

- I2S Microphone: VCC (to) ESP32-E Microcontroller: 3V3;
- I2S Microphone: GND (to) ESP32-E Microcontroller: GND;
- I2S Microphone: SEL (to) ESP32-E Microcontroller: 4/D12;
- I2S Microphone: DO (to) ESP32-E Microcontroller: 26/D3;
- I2S Microphone: SCK (to) ESP32-E Microcontroller: 25/D2;
- I2S Microphone: WS (to) ESP32-E Microcontroller: 16/D11;

#### 7.1.4 Sample Code

Function: The microphone reads data of left channel and prints the data.

```
#include "DFRobot_MSM261.h"

#define SAMPLE_RATE      (44100)
#define I2S_SCK_IO       (25)
#define I2S_WS_IO        (16)
#define I2S_DI_IO        (26)
#define DATA_BIT        (16)
#define MODE_PIN         (4)
DFRobot_Microphone microphone(I2S_SCK_IO, I2S_WS_IO, I2S_DI_IO);
char i2sReadrawBuff[100];
void setup() {
    Serial.begin(115200); //Serial rate 115200
    pinMode(MODE_PIN, OUTPUT);
    digitalWrite(MODE_PIN, LOW); //Configure the microphone as receiving data of left channel
    while(microphone.begin(SAMPLE_RATE, DATA_BIT) != 0){
        Serial.println(" I2S init failed"); //Init failed
    }
    Serial.println("I2S init success"); //Init succeeded
}

void loop() {
    microphone.read(i2sReadrawBuff, 100);
    //Output data of left channel
    Serial.println((int16_t)(i2sReadrawBuff[2] | i2sReadrawBuff[3] << 8));
    delay(100);
}
```

### Result

Blow into the microphone, and the corresponding peak & trough of the wave can be seen in the serial monitor.

## Pin Connections:

I2S Microphone: VCC (to) ESP32-E Microcontroller: 3V3;

I2S Microphone: GND (to) ESP32-E Microcontroller: GND;

I2S Microphone: SEL (to) ESP32-E Microcontroller: 4/D12;

I2S Microphone: DO (to) ESP32-E Microcontroller: 26/D3;

I2S Microphone: SCK (to) ESP32-E Microcontroller: 25/D2;

I2S Microphone: WS (to) ESP32-E Microcontroller: 16/D11;

MicroSD Module: +5V (to) ESP32-E Microcontroller: VCC;

MicroSD Module: GND (to) ESP32-E Microcontroller: GND;

MicroSD Module: MOSI (to) ESP32-E Microcontroller: 23/MOSI;

MicroSD Module: SS (to) ESP32-E Microcontroller: 2/D9;

MicroSD Module: SCK (to) ESP32-E Microcontroller: 18/SCK;

MicroSD Module: MISO (to) ESP32-E Microcontroller: 19/MISO;

### 7.2.3 Sample Code

Fucntion: This sample shows how to record a 20s audio with the parameter of 16bit & 44.1kHz and save it to the SD card as a WAVE file.

Note: Use the parameter of 16bit & 44.1kHz (in the format of a CD)

The higher the sampling frequency, the better the sound quality and the larger the data size. The commonly used frequencies include 11.025kHz, 22.05kHz, 44.1kHz, 48kHz and 96kHz.

The bigger the bit depth, the better the sound quality and the larger the data size. The commonly used bit depth includes 8-bit, 16-bit, 24-bit and 32-bit.
